

Method and Device for Transmitting Safety-critical Operating Conditions of a Motor Vehicle

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method for transmitting a safety-critical operating condition of a safety-critical system of a motor vehicle to the driver, and a device for implementing the method.

Transmission of a safety-critical operating condition to the driver by means of a control lamp can be disrupted if the control lamp is broken or the driver ignores the control lamp. To this end, measures are provided which reduce the driving comfort of the driver and draw his attention to the safety-critical operating condition.
